

## ANIMAL HEALTH TRUST AND STANDARD POODLE CLUB

Sebaceous Adenitis in Standard Poodles Research Project

Blood Samples needed from the following pedigree examples of related dogs:-

1. Samples from affected individuals and their parent (and their grandparents if available)
2. Samples from unaffected littermates are also very valuable.
3. Affected and unaffected half-siblings, Sire and Dam.
4. Samples from any standard poodle related or not.

For each dog in the study the following is required:

1. A 5ml. sample of blood preserved in an EDTA tube. Label with dog's pet name and owner's name. Keep blood from freezing.
2. KC. registration number and name.
3. Copy of dog's pedigree with disease status if known, pet name.
4. Result of SA biopsy report (if done).

---

Date.....
